## **DETAILED ACTION**

### ***Drawings***

1. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the copy of the claims are hand drawn and not labeled in English. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.
2. The information disclosure statement filed on 10/20/2009 has been considered.

### ***Allowable Subject Matter***

1. Claims 25-32, 34-38, 40-43 and 45-48 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant's independent claim 25 recites, *inter alia*, a method for controlling the transmission power in a radio system, the method comprising the steps of evaluating a signal received by a receiver via a transmission channel of the radio system from a transmitter, producing power control information as a function of the signal, embedding the power control information in a timeslot structure together with further data to be transmitted in the same timeslot to said transmitter, coding, in the receiver, the power control information in one time slot in a manner where the power control information is

Art Unit: 2617

coded, with the addition of redundancy, together with the further data to be transmitted in the same timeslot to form a common data word, with at least one bit value in the data word depending on the power control information and on the further data, transmitting the coded power control information in one timeslot to the transmitter, together with the further data to be transmitted in the same timeslot and setting, in the transmitter, the transmission power as a function of the transmitted coded power control information.

Applicant's independent claim 37 recites, *inter alia*, a radio system comprising a transmitter, and a receiver for receiving a signal from the transmitter, which is transmitted via a transmission channel of the mobile radio system, wherein the receiver evaluates the signal, produces power control information as a function of the signal, embeds the power control information in a timeslot structure together with further data to be transmitted in the same time slot to form a common data word, with at least one bit value in the data word depending on the power control information and on the further data and transmits the coded power control information in one timeslot to the transmitter, together with the further data to be transmitted in the same time slot, and wherein the transmitter sets the transmission power as a function of the transmitted coded power control information.

Applicant's independent claims recite a specific combination that is neither taught nor suggested in the prior art. The closest prior art of record, Jarbot et al., Laakso et al and Uesugi each differ from the claimed invention by not explicitly reciting all of the coding steps as stated above. Applicant's claims are allowed for this reason and the

Art Unit: 2617

reasons stated in the Applicant's responses dated 7/7/2005, 1/23/2006, 7/6/2006, 1/19/2007, 7/20/2007, 12/19/2007, 5/21/2008 and the decision by the BPAI.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
